Press Release

JENOPTIK subsidiaries unified as JENOPTIK Optical Systems, Inc.

Release date: 4 January 2010

MEMS Optical, Inc. (Huntsville, AL) and JENOPTIK Polymer Systems, Inc. (Rochester, NY) have merged with **JENOPTIK Optical Systems, Inc.** (Jupiter, FL) effective January 4, 2010. The merged company will create a single corporation for the US based manufacturing operations of JENOPTIK | Optical Systems division.

With the merger, JENOPTIK Optical Systems, Inc. has a unique breadth of manufacturing and design capabilities including optical lens assemblies, optical components, refractive and diffractive microoptics manufactured with wafer level techniques, and molded polymer optics. Customers include those requiring design & manufacture of prototype optical assemblies through high volume component manufacturing for applications ranging from UV through LWIR.

With today's announcement, the company now includes 125 employees and 100,000 square feet of US optical manufacturing across 3 facilities. The unified entity will allow each location to realize the efficiencies of a larger organization, simplify marketing efforts, increase brand recognition and continue the technical excellence developed in each of the locations.

Primary markets are life science research, defense, semiconductor manufacturing, digital projection, optical metrology and astronomical research but in fact are any that require custom precision optics.

JENOPTIK Optical Systems, Inc. is a Florida corporation, is ITAR compliant and looks forward to continuing to serve our customers in all markets from all facilities.

JENOPTIK AG (Jena, Germany) acquired MEMS Optical 2006 and JENOPTIK Polymer Systems, Inc. was established in Rochester the same year. In July 2009, subsidiaries Coastal Optical Systems and Liebmann Optical Company merged to form JENOPTIK Optical Systems, Inc.

****Effective 01 July 2009 Coastal Optical Systems became JENOPTIK Optical Systems, Inc. and remains a Florida Corporation.****

JENOPTIK | Optical System division

The Optical Systems Division of Jenoptik is a worldwide leader in precision optics designed to meet the highest quality standards.

The division is a development and production partner for optical, micro-optical and optical coating components, opto-mechanical assemblies, modules and systems - made from glass, crystalline and polymers. It possesses outstanding expertise in the development and manufacture of micro-optics for beam shaping used in the semiconductor industry and laser material processing.

The product portfolio also includes cameras for digital microscopy and macroscopy as well as digital imaging modules for integration within industrial image capture and processing systems.

Optical Systems is one of the five main operational divisions of the JENOPTIK Group. The others are Lasers & Material Processing, Industrial Metrology, Traffic Solutions and Defense & Civil Systems.
